                                                     contacting the cells with calcationing or its fragments variants).

Fragments of calrecticulin causes at least 40% inhibition of angiogenesis, tumor growth und/or endothelial cell growth (claimed). The method may be used for inhibiting angiogenesis in a patient. The angiogenesis is mesouscilated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental fibroplasia, trachoma, neovascular glaucoma, psoriasis, angiofibromas, immune inflammation, atherosclerosis, excessive wound repair, retinal neovascularization, macular degeneration, corneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, theumatoid arthritis, systemic lupus erythromatosus, thyroiditis, doodpasture's syndrome, systemic vasculitis, scleroderma sjorgen's syndrome, surcoidosis and primary biliary cirrhosis). The method may also be used for treating/inhibiting tumor growth especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MBP-calreticulin; maltose binding protein; angiogenesis; inhibition; endothelial call; anti-angiogenic; neuroprotective; antidiabetic; cytostatic; dermalogical; immunosuppressive; antiinflammatory; hepatic; anti-atherosclerotic; gastrointestinal; anti-arthritic; ophthalmic.

Recombinant human MBP-calreticulin comprises the sequence of human caltericulin (see AV92349) without the 17 N-terminal amino acids.

A novel method of inhibiting endothelial cell growth comprises contacting the cells with calreticulin (or its fragments/variants).

Fragments of calreticulin causes at least 40% inhibition of angiogenesis, tunor growth and/or endothelial cell growth (calaimed). The method may be used for inhibiting angiogenesis in a patient. The angiogenesis is associated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental introperson inflammation, atherosclerosis, excessive wound repair, retinal neovascularization, acherosclerosis, excessive wound repair, retinal neovascularization, adisease, non-immune inflammation, in acular degeneration, corneal graft rejection, contact lens overwear, Cronn's disease, non-immune inflammation, thematoid arthritis, systemic lupus erythromatosus, thyroiditis, condopsature's syndrome, systemic lupus erythromatosus, thyroiditis, goodpasture's succidents and primary biliary cirrhosis). The method may also be used for treating/inhibiting tumor growth especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic peptides corresp. to an epitopic core of Ro antigen are expressed recombinantly to detect autoantibodies, for identification of autoimmune diseases. These epitopes are AAs 24-36, 23-36, 188-209,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The invention relates to the use of a cC1qR binding domain in a medicament to effect complement ubiquitin (CUB) functionality, and an inhibitor of the CC1qR binding domain in a medicament to inhibit CUB functionality. The CC1qR binding domain, or its inhibitor, can be used to treat a human or animal body. Particularly an inhibitor is used to treat complement activation involved in the initiation and maintenance of inflammation, for example in myocardial infarction, brain ischaemia rheumatoid arthritis, systemic lupus erythematosus, burns, immune complex nephritis, and to treat amyloid plaques in Alzheimer's disease. The use of CC1qR binding domain or inhibitor enables the CUB domain functionality to be modulated using a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Clq and collectin receptor; cClqR binding domain; complement ubiquitin; CUB functionality; inhibitor; complement activation; inflammation; myocardial infarction; brain ischaemia; gut ischaemia; amyloid plaque; rheumatoid arthritis; systemic lupus erythematosus; Alzheimer's disease; immune complex nephritis; therapy.

A novel method of inhibiting endothelial cell growth comprises

contacting the cells with calreticulin (or its fragments/variants).

Fragments of calreticulin causes at least 40% inhibitino of angiogenesis,

tumor growth and/or endothelial cell growth (claimed). The method may be

used for inhibiting angiogenesis in a patient. The angiogenesis is

associated with a disease other than a tumor that is associated with

neovascularization (e.g. diabetic neuropathy, retrolental fibroplasia,

trachoma, neovascular glaucoma, psoriasis, angiofibromas, immunue

neovascularization, atherosclerosis, excessive wound repair, retinal

neovascularization, acular degeneration, corneal graft rejection,

contact lens overwear, Crohn's disease, non-immune inflammation,

rheumatoid arthritis, systemic lupus erythromatcosus, thyroiditis,

coodpasture's syndrome, systemic vasculitis, scleroderma, sjorgen's

syndrome, sarcoidosis and primary cirrhosis). The method may

Flea calreticulin protein PCtCall589 (AAW04171) is a calcium-binding protein found in the salivary glands of Ctenocephalides felis.

Its amino acid sequence was deduced from a cDNA clone (AAT9516) obtd. from a calivary gland cDNA library. Recombinant PCtCall589 can be produced in host cells transformed with a vector carrying calreticulin nucleic acids. Calreticulin alters the blood feeding behaviour of haematophagous insects and can be administered to an animal to reduce infestation. It reduces calreticulin activity in insects, so reducing the insect burden on an animal. Calreticulin can be used to elicit an immune response, thereby desensitising an animal to allergic dermatitis caused by fleas, mosquitoes or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2 DMHGDSEYNIMFGPDICGPGTKKVHVIFNYKGKNVLINKDIRCKDDEFTHLYTLIVRPDN 61

It and a C-domain derived peptide (AAW06736) are useful for treating a patient to inhibit restenosis. The calreticulin-type cpds. are administered either parenterally, intravenously or via a catheter and can target areas of vascular damage

                                                                                                                                                                                                                                                                                                         from RNA isolated from nodules excised from patients infected with O. volvulus. The N-terminal is incomplete, however Abs which specifically bind to protein prepd. from induced cultures of lambda RAL-1 lysogens recognise a single polypeptide of mol. wt. 42.000 in extracts of adult worms. Analysis deduced sequence suggests that it encodes a protein of mol. wt. 39,130. If the cuignests that it encodes a protein of mol. wt. 39,130. If the suggests that nost of hecoding sequence is present. The three repeats are highly hydrophilic regions likely to be exposed on the antigen expressed by the clone can be used stimulate T-cells of individuals infected by the parasite to proliferate and may be used as the basis for a vaccine against Onchocerciasis or river

A novel method of inhibiting endothelial cell growth comprises

contacting the cells with calreticulin (or its fragments/variants).

Fragments of calreticulin causes at least 40% inhibition of angiogenesis,
tumor growth and/or endothelial cell growth (claimed). The method may be
used for inhibiting angiogenesis in a patient. The angiogenesis is
associated with a disease other than a tumor that is associated with
neovascularization (e.g. diabetic neuropathy, retrolental fibroplasia,
trachoma, neovascular glaucoma, psoriasis, angiofibromas, immune
contact lens overwear, crohn's disease, non-immune inflammation,
contact lens overwear, crohn's disease, non-immune inflammation,
contact lens overwear, crohn's disease, non-immune inflammation,
cheumatoid arthritis, systemic lupus erythromatosus, thyroiditis,
cheumatoid arthritis, systemic vasculitis, scleroderma, Sjorgen's
syndrome, sarcoidosis and primary blilary cirrhosis). The method may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Inhibiting endothelial cell growth and angiogenesis using calreticulin, useful for suppressing tumor growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MBP-calreticulin; maltose binding protein; angiogenesis; inhibition; endothelial cell; anti-angiogenic; neuroprotective; antidiabetic; cytostatic; dermalogical; immunosuppressive; antiinflammatory; hepatic; anti-atherosclerotic; gastrointestinal; anti-arthritic; ophthalmic.

```

```
This sequence comprises recombinant human calreticulin (AAY92350)
missing the N-terminal 120 amino acids.
A novel method of inhibiting endothelial cell growth comprises
contacting the cells with calreticulin (or its fragments/variants).
Fragments of calreticulin causes at least 40% inhibition of
anjiogenesis, tumor growth and/or endothelial cell growth (claimed). The
method may be used for inhibiting angliogenesis in a patient. The
anglogenesis is associated with a disease other than a tumor that is
method may be used for inhibiting angliogenesis, and patient. The
anglogenesis is associated with a disease other than a tumor that is
cansociated with neovascularization (e.g. diabetic neuropathy, retrolental
fibroplasia, trachoma, neovascular glaucoma, psoriasis, angiofibromas,
immune inflammation, atherosclerosis, excessive wound repair, retinal
neovascularization, ancular degeneration, corneal graft rejection,
contact lens overwear, Crohn's disease, non-immune inflammation,
cheumatoid arthritis, systemic lupus erythromatosus, thyroiditis,
coodpasture's syndrome, systemic vasculitis, scleroderma, Sjorgen's
syndrome, sarcoldosis and primary biliary cirrhosis). The method may
also be used for treating/inhibiting tumor growth especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid molecules encoding a calcium binding chaperone protein in endoplasmic reticulum, calreticulin, and calreticulin promoter sequences, useful for producing foreign gene products in plant cells .
                                                                            cell growth and angiogenesis using calreticulin, tumor growth

                                                                                                                                                                                                                                                                                                                                             contacting the cells with calreticulin (or its fragments/variants).

Contacting the cells with calreticulin (or its fragments/variants).

Cragments of calreticulin causes at least 40% inhibition of anglogenesis, timor growth and/or endothelial cell growth (claimed). The method may be used for inhibiting anglogenesis in a patient. The anglogenesis is used for inhibiting anglogenesis of the associated with neovascular glaucoma, partial anglofibromas, immune inflammation, atherosciarosis, excessive wound repair, retinal neovascularization, macular degeneration, corneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, contact lens overwear, crohn's disease, non-immune inflammation, contact lens overwear, systemic lauge erythromatosus, thyroiditis, coodparture's syndrome, systemic lugue erythromatosus, thyroiditis, coodparture's syndrome, systemic vasculitis, scleroderma, Sjorgen's unanche used for treating/inhibiting tumor growth especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                     Inhibiting endothelial call growth and angiogenesis using calreticulin, useful for suppressing tumor growth

                           The present invention provides the protein and coding sequences for the castor bean calreticulin protein and the calreticulin promoter sequence. In addition, the castor bean calnexin protein, coding sequence and promoter are also described. Calreticulin and calnexin are calcium binding proteins found in the endoplasmic reticulum (er). The calreticulin promoter sequence can be used in vectors to promote the expression of foreign genes, particularly resistance genes, in plant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 7, All Sequence 7, All Sequence 10, All Sequence 28, All Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 63, Application US/08996679
Patent No. 6169071
CENERAL INFORMATION:
APPLICANT: Blaschuk, Orest W.
APPLICANT: Gour, Barbara J.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING
TITLE OF INVENTION: CELL ADHESION
NUMBER OF SEQUENCES: 63
CORRESPONDENCE ADDRESS:
ADDRESSED and BERRY LLP
STREET: 6300 Columbia Center, 701 Fifth Avenue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length 17;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     COMPUTER READABLE FORM:
